SunCedar Solar

Home solar for Lebanese families

Power your home, not your generator bill.

Founded	2021
Headquarters	Zalka, Metn, Lebanon
Homes powered	1,400+ installations (as of September 2026)
Contact	WhatsApp +961 70 000 111 (24/7) • hello@suncedar.example
Showroom hours	Monday to Saturday, 9:00 to 18:00

SunCedar Solar is a fictional company created for an academic assignment.

Who we are

SunCedar Solar designs and installs solar power systems for homes across Lebanon. For years, Lebanese families have lived between short hours of EDL (state grid) power and expensive neighbourhood generator subscriptions (the *ishtirak*). We started SunCedar in 2021 to give households a reliable, clean and predictable alternative: their own power, on their own roof.

Our mission

To help every Lebanese family stop depending on the grid and on generator subscriptions, with honest pricing, fast installation and support that actually answers.

Why SunCedar: our three promises

- **Fixed-price quote after a free site visit.** An engineer visits your home for free, measures your roof and your consumption, and gives you one fixed price. The price on your quote is the price you pay. No hidden extras on installation day.
- **Installation within 7 days.** Your system is installed within 7 days of paying the deposit. If we are late, we credit you **$50 for every day of delay**, deducted from your final payment.
- **24/7 WhatsApp support.** A real person from our support team answers on WhatsApp (+961 70 000 111) day and night, including weekends and holidays.

Our services

- **Home solar installation:** complete rooftop systems for apartments, houses and villas.
- **Battery and inverter systems:** LiFePO4 lithium batteries and hybrid inverters that keep the lights on at night and during blackouts. We also upgrade existing systems with extra batteries.
- **Maintenance plans:** panel cleaning, electrical checks and battery health reports (SunCare plans).
- **Free site assessment:** a no-obligation visit by an engineer, usually within 48 hours of your request.

How it works

Step	What happens	Timing
1. Contact us	Send us a WhatsApp message, an email, or chat with Nour, our online advisor.	Any time
2. Free site visit	An engineer checks your roof, shading, electrical panel, EDL hours and generator amperage.	Within 48 hours
3. Fixed-price quote	You receive a written quote with one fixed price. The quote is valid for 14 days.	Within 24 hours of the visit
4. Installation	Our crew installs, wires and tests the system. Most homes take 1 to 2 days on site.	Within 7 days of the deposit
5. Handover	We set up the monitoring app on your phone and show you how the system works.	On installation day
6. Support	24/7 WhatsApp support and your first-year maintenance visit.	Ongoing

Packages and prices

All prices are in US dollars, fixed, and include equipment, mounting structure, wiring, protection devices, installation, integration with EDL and your generator, the monitoring app, and one free maintenance visit in the first year. Prices apply to standard rooftop installations in our main service areas; your fixed quote after the site visit confirms the final price for your home.

	Basic	Family	Villa
Price (USD)	**$3,450**	**$6,450**	**$12,900**
Solar panels	6 × 550 W mono (3.3 kWp)	12 × 550 W mono (6.6 kWp)	24 × 550 W mono (13.2 kWp)
Inverter	5 kW hybrid inverter	8 kW hybrid inverter	12 kW three-phase hybrid inverter
Battery	5.12 kWh LiFePO4	10.24 kWh LiFePO4	20.48 kWh LiFePO4
Typical daily production	about 14 kWh	about 28 kWh	about 56 kWh
Best for	Apartments and small homes (2 to 3 people)	Family homes (4 to 6 people)	Villas and large homes
What it can run	Lights, fridge, TV, internet router, fans, laptops, washing machine (daytime)	Everything in Basic, plus water pump, microwave, and 1 inverter AC during sunny hours	Everything in Family, plus 2 to 3 inverter ACs during sunny hours and an electric water heater (daytime)
Night backup (typical)	8 to 10 hours of essential loads	8 to 10 hours of most loads	A full night of most loads, including 1 AC on low
On-site install time	1 day	1 to 2 days	2 days

Add-ons

Add-on	Price (USD)	Notes
Extra battery module (5.12 kWh LiFePO4)	$1,350	Fits all packages; also for upgrading existing systems
Extra 550 W panel	$140 per panel	Subject to roof space and inverter capacity
Elevated steel structure	$350	For roofs with water tanks or shading; confirmed at site visit
Bekaa travel fee	$150	One-time fee for installations in Zahle and Chtaura

Note: we do not offer custom systems larger than the Villa package, commercial or industrial projects, or off-roof (ground-mounted) systems.

Maintenance plans (SunCare)

Plan	Price	What is included
SunCare Basic	$120 per year	2 visits per year: panel cleaning, electrical and connection check, inverter software update
SunCare Plus	$220 per year	4 visits per year, everything in Basic, plus a battery health report and a priority technician visit within 24 hours if something goes wrong

Every new installation includes one free maintenance visit in the first year. SunCare plans can be added at any time, including for systems installed by other companies (after an inspection).

Warranty

Component	Warranty
Solar panels	12-year product warranty; 25-year performance warranty (at least 80% of rated output)
Hybrid inverter	5 years
LiFePO4 battery	10 years or 6,000 cycles, whichever comes first
Installation workmanship	2 years (wiring, mounting, leaks caused by our installation)

Warranty claims are opened through WhatsApp support. Replacement parts are installed by our technicians at no cost during the warranty period.

Payment options

- Cash in US dollars at our Zalka showroom or on installation day.
- Bank transfer in fresh US dollars.
- Card payment (Visa or Mastercard) at the showroom.
- Standard payment schedule: **30% deposit** when you accept the quote, **70% on completion** of the installation.
- Installment plan for Family and Villa packages: **40% upfront, then 6 equal monthly installments with 0% interest**.

Service areas

Region	Areas covered	Travel fee
Beirut	All of Beirut	None
Mount Lebanon	Metn, Keserwan, Baabda, Aley, Chouf	None
North	Jbeil (Byblos), Batroun, Koura, Tripoli	None
South	Saida, Jezzine, Tyre (Sour)	None
Bekaa	Zahle and Chtaura only	$150

Areas not listed (for example Akkar, Baalbek-Hermel and Nabatieh) are not covered yet.

Our team

SunCedar was founded by three friends who were tired of planning their evenings around generator schedules. Today the company has 38 employees, including 6 installation crews.

Karim Haddad, Co-founder and Chief Engineer

Electrical engineer with 11 years of experience in power systems, including 6 years designing utility-scale solar plants in the Gulf. Karim designs every SunCedar package, approves every quote and trains our engineers. He believes a good system is one the customer never has to think about.

Rania Khoury, Co-founder and Head of Operations

Rania spent 8 years in supply chain and logistics before co-founding SunCedar. She runs our warehouse and our 6 installation crews, and she is the reason we can promise installation within 7 days: SunCedar keeps every package in stock in its own warehouse.

Maya Nasr, Co-founder and Head of Customer Success

Maya built SunCedar's 24/7 WhatsApp support team and the customer onboarding process. Before SunCedar she led customer service at a Lebanese telecom retailer. She personally reads every piece of customer feedback and every complaint.

Frequently asked questions

Will the system work at night and during blackouts?

Yes. The battery charges from the sun during the day and powers your home at night and during EDL cuts. Switching from EDL to the battery is automatic and you will not notice it.

Can I keep my generator subscription?

Yes. Every SunCedar system is integrated with EDL and with your generator. Most of our customers reduce their subscription (for example from 10 A to 5 A) and many cancel it completely after the first months.

How quickly does the system pay for itself?

Most customers recover the cost in about 2 to 3 years, depending on their previous generator and EDL bills. We calculate an estimate for your home during the free site visit.

I live in an apartment building. Can I install on the roof?

Usually yes, with the agreement of the building committee or the other owners. We can join a meeting with your building committee to explain the installation.

Do I need to be home for the site visit?

Yes, an adult from the household should be present so our engineer can check the electrical panel and discuss your consumption. The visit takes about 45 minutes.

What happens in winter or on cloudy days?

Production drops on cloudy days, typically to 30 to 60% of a sunny day. The system automatically uses EDL or your generator to recharge the battery when solar is not enough.

Can I add more batteries or panels later?

Yes. All packages are designed to be expandable. See the add-ons table for prices.

Can I monitor my system?

Yes. The SunCedar monitoring app shows production, battery level and consumption in real time on your phone.

Do I have to pay for the site visit?

No. The site visit is always free and there is no obligation to buy.
